

MICROGRANULAR MYCORRHIZAS, 200 G

Code: 1110426

Product acting on the soil - Inoculum of mycorrhizal fungi - Stop lawn diseases
Greater rooting, thriving and healthier plants. Ideal for sowing lawn and vegetable garden

FORMULATION

MICROGRANULAR.

PACKS

200 g box with propor. spoon

Charateristics

natural product based on the inoculum of selected mycorrhizal fungi which, living in symbiosis with the roots of the plants, strengthen the root system, facilitating the absorption of nutrients from the soil. Therefore the plant becomes healthier and more vigorous, resistant to environmental stresses (water, cold, etc ...) and to adversities (in particular the most pervasive root diseases caused by fungi such as Pythium) thanks to saprophytic fungi (in particular Trichoderma harzianum), which produces enzymes capable to degrade the cell walls of the pathogen and metabolites that inhibit the growth of spores. Ideal for sowing lawns that will grow quickly, greener and healthier, and for sowing gardens with more abundant flowering and fruiting, with healthy fruits, with a more intense color and flavor.

Florlis®

How to use

each pack is equipped with a special measuring spoon particularly useful for applications. Vegetable gardens: 10 g (approximately 1 tablespoon) per 10 m². Then water. Repeat every 30 days. Lawn: 10 g (approximately 1 tablespoon) per 10 m². Then water. Repeat every 30 days. Potted plants: 1 g (equal to about 1/4 tablespoon) for 50 cm diameter pots, 2 g (equal to about half a tablespoon) for 1 m pots and so on; then water. Repeat every 30 days.
