

ORGANIC FIRST AID FOR WEAKENED PLANTS SOIL CONDITIONER, 300 G

Code: 1130615

Soil Conditioner - Clinoptilolite-based zeolite

COMPOSITION

natural zeolites 95% - measured cation exchange capacity 200 cmoles/ kg

FORMULATION

micronized wettable powder

PACKS

300 g box

Florlis®

Charateristics

product based on micronized zeolite, enriched with guano, algae, palm tree ash, neem and dolomite, suitably studied to help plants weakened by environmental stress, nutritional deficiencies and diseases to regain their energy balance. Applied on vegetables and ornamental plants: 1) it helps to absorb excess water, avoiding so the water stagnation which is the main cause for radical rot, the leaching of nutrients and the excess of salinity, thanks to zeolite which can absorb water and nutrients in the soil, releasing them to the plant according to its need. Moreover zeolite cleans the soil from residues of phytosanitary products and heavy metals which can affect adversely the development of plants; 2) it encourages the rooting, thanks to the presence of neem which improves the root growth; 3) it speeds up the development of the plants, thanks to algae which are naturally rich in hormones, amino acids, sugar and vitamins and thanks to guano; 4) it stimulates the bloom thanks to palm tree ash which is naturally rich in phosphorus and magnesium, and to dolomite which too is rich in magnesium; 5) it encourages the fructification thanks to palm tree ash which is naturally rich in potassium and calcium; 6) it helps to get healthier plants thanks to neem which increases the resistance to environmental stress, diseases and infections due to soil insects.

How to use

each packaging has a proportioning spoon. One spoon contains about 10 g. Soil preparation: mix 10 g (one spoon) every 2 litres substratum. Soil treatments by watering: dissolve 10 g (one spoon) in 1.5 litres water and water the soil with this solution every 15-20 days.
