

HORMON PLUS, 50G

Code: 1130810

Product acting on the soil - Inoculum of mycorrhizal fungi
Rooting powder

FORMULATION

powder.

PACKS

50 g box with propor. spoon

Charateristics

natural product based on the inoculum of mycorrhizal fungi. Specially designed to help rooting and engraftment of plants in transplantation. This is possible thanks to a specialized selection of beneficial microorganisms that stimulate and support a radical multiplication. Ideal for cuttings and transplanting.

How to use

each pack is equipped with a special measuring spoon particularly useful for applications. Cuttings: soak the base of the cuttings in water to a depth of about 3 cm, then drain (but leave slightly moistened) and dip in the powder. Transplanting: dilute 4 g (equal to a measuring spoon) in a liter of water and with the solution obtained, water the plants 24 hours before transplanting and immediately after planting, making sure that the solution wets the roots both before and after transplant. The product can also be used as it is in a dose of 4 g / every 10 m².
