

CALCIUM FERTILIZER, 500 G

Code: 1131040

EC Fertilizers specific for tomato, solanaceous plants,
apple Up to 250 litres solution

COMPOSITION

Calcium chloride solution (Ca) (12)

FORMULATION

liquid to dilute.

PACKS

500 g bottle.

Charateristics

liquid fertilizer based on calcium, an essential component of the cell walls which is directly responsible for the consistency of the fruits. The calcium contribution increases the mechanical resistance of the vegetable tissues; it protracts the ripening time and the ageing of fruits in particular, keeping their structure of the cell walls and membranes intact. The most common diseases caused by calium deficiencies are the tomato apical rot which shows up with an injury of the berry apex which becomes black, the apple bitter rot with the decay of the internal pulp, the apical drying up of the vine rachis, the lettuce tip burn which shows up with apical necrosis, the yellowish edge of the poinsettia, the formation of deformed buds and flowers of short duration in flowering plants.

Florlis®

How to use

each packaging has a measuring cup. Each notch of the cup is equivalent to 10 ml. Foliar treatments: dilute 20 ml in 10 litres water and atomize the solution on the plants with a sprayer or a pump. Root treatments: dilute 10 ml in 10 litres water and spread the solution on the soil with a watering can (10 ml for 2-3 m²). Curative action: carry out 2-3 treatments in spring, every 8-12 days when the first symptoms arise. Preventive action: start treatments at the beginning of the growing season, every 10-15 days.
