

EXPANDED CLAY FOR HYDROPONICS 7 LITERS

Code: 1150010

Grain size: 8-16 mm Colour: intense brick-red

PACKS

7 l sack.

Characteristics

The product consists of small spheres of 8-16 mm diameter and is particularly useful to aid the correct water drainage; moreover if placed at the bottom of the pots it improves the air circulation while if mixed to the substratum it creates a better environment to the root development. The product is indispensable in hydroponics, where it helps the development of the root apparatus.

How to use

- drainage: at the bottom of the pot- covering: on top of the substratum, just next to the plant collar- aeration: mixed with the substrate- hydroponics
