

BIOCHAR VEGETABLE CARBON, 2 L

Code: 1210500

Increases soil fertility and reduces the need of irrigations

FORMULATION

Friable, of an intense black color

PACKS

2 liters box

Charateristics

Product derived from wood chips: from the cleaning of green areas and woods as well as from wood processing waste. During its production, captures CO² inside its structure - made up of over 75% carbon - which than stores in the soil (in the form of nutrients), thus creating a virtuous circle. Thanks to its enormous porosity (> 475 m² / g) it retains water and nutrients, releasing them slowly into the soil and making them available to plants only when necessary, reducing need of fertilizer and allowing a significant water saving.

How to use

Add from 10% to 20% of product to the soil. To be used for agricultural purposes only.
