Code: 1230691

ideal for lawns, gardens and kitchen gardens - rich in iron oxide

FORMULATION

microgranulated.

PACKS

1500 g box.

Charateristics

the product naturally prevents the presence of snails and slugs in the garden, the kitchen garden and the plants. It is a mineral granulated compound of natural origin (sepiolitic clay) which doesn't contain chemicals or insecticides and, thanks to its capacity to soak up a large amount of water, gives rise to a dry environment which is unfavourable to the life of snails and slugs. Moreover, the immediate contact with the granules causes their quick dehydration, drying their fluids and forcing them to go away without killing them. The product can be used in all places where it is necessary to prevent the infestation, both inside pots and around gardens, kitchen gardens and orchards. The product is not dangerous to people, animals and plants and is not harmful to the environment if used properly.

Florlis®

How to use

potted plants: scatter uniformly on the soil, on the whole surface..Garden and kitchen garden: scatter on the soil setting up a barrier along the whole boundary of the area to protect (up to 15 m). Repeat after rains and abundant irrigations which can reduce the effectiveness of the treatment in order to restore the initial conditions.
