

Florlis®

CONTAINER FOR MOUSE BAIT, 1 UNIT PACK

Code: 1330175

with bait holder

PACKS

1 container 23x16x8.5 cm.

Charateristics

indispensable tool to fight domestic little mice which infest houses, cellars, garages and outdoor spaces. It is made of polypropylene, a sturdy shock- and weatherproof material, it has a safety catch with lock and is designed to contain and protect rodenticide baits (in bags, cubes or loose) which remain fresh inside the special compartment, safe from dust, dirt and humidity, but above all from possible contacts with children and/or domestic animals.

How to use

place the container along inside or outside walls and in all customary points of passage of mice. Do not move the container after the consumption has begun, so as not to rouse a suspicious behaviour of the rodents: baits must be restored as they are being consumed.
