BEDBUG TRAP, 2 UNITS PACK

Code: 1331560

to control bedbugs

PACKS

box 2 traps

Charateristics

environmental trap suited to detect the presence of bedbugs, containing an odourless attractant placed directly into the glue. The trap can be used where bedbugs are usually found more often (headboards, between mattress and wired bed frame, armchairs, couches) in order to make sure that the place isn't infested with such insects. Since they are haematophagous insects, the effectiveness is higher in those places where humans are present close to the trap. It is advisable to use at least two traps for a medium-sized room. The product contains no insecticides, is unchangeable over time, doesn't ooze nor smear and lasts about 3 months since the moment the packaging is opened.

How to use

open the envelope and remove the siliconized paper which protects the coat of glue of the trap. Fold and close like a book. Place between the wired bed frame and the mattress, behind the headboards, under the cushions of couches or armchairs. Use the double-sided tape should one need to fasten the trap in the point it is positioned. Replace the trap every 90 days or when it is covered with preys or inactive owing to dust or dirt.
