

WHITE CHROMOTROPIC TRAPS AGAINST FLIES AND TOMATO BUGS

Code: 1333040

capture without using poison

PACKS

Flow-pack with 5 traps

Charateristics

it's a coloured sheet in plastic material, water- and weatherproof, covered with glue on both sides, whose operating principle is based on the power of attraction of white colour to sawflies and tomato bugs which move towards the trap and, once they settle on it, get caught in the glue and cannot free themselves anymore. The trap contains no insecticides, allowing an effective and 100% natural pest control. Ideal for fruit trees, gardens and kitchen gardens.

How to use

remove the adhesive paper on both sides and hang the trap using the included cable, keeping a distance of 2 m with each other trap.
