

COPPER OXYCHLORIDE WITH BORON FERTILIZER, 300 G

Code: 1333310

EC Fertilizer

COMPOSITION

Flowing mixture of micronutrients based on copper (Cu) 7 and boron (B) 0.5

FORMULATION

liquid paste

PACKS

300 g bottle

Charateristics

it is a fertilizer based on copper oxychloride and boron to prevent and control copper deficiencies. Copper is an essential element for the life of all plants: it is a constituent of important enzymes, is necessary to the photosynthesis and helps to stimulate the natural defences of the plants from pests. Copper deficiencies appear as yellowings, formation of spots on the leaves and atrophization of the young sprouts. The symptoms arise more often in those soils which are rich in organic substance and with alkaline reaction. The copper oxychloride carries out also an important action to prevent and treat cryptogamic diseases like mildew, scab, botrytis, sooty mould etc. Thanks to its flowable formulation, the absorption of the product by the leaves is fast.

Florlis®

How to use

shake well before use. Foliar treatment: dilute 10-15 ml in 5 litres water for 50 m². Sprinkle the plants trying to get a complete and homogeneous wetting. Carry out 2- 3 treatments during the cultivation cycle, at the beginning of the season or when the first symptoms of deficiency arise. Repeat the treatments in case of heavy rain. DO NOT TREAT DURING THE BLOOM.
