homeopathic preparation obtained from vegetable and mineral extracts, studied on purpose to strengthen the plants naturally and increase their resistance to insects with hard exoskeleton like scale insects, potato beetle etc.

Flortis®

How to use

Preventive action: shake the bottle well, dilute the content of 3 full caps in 1 litre water and sprinkle the plants with a watering can. It is advisable to carry out a first treatment at the time of sowing or transplanting and repeat it up to a maximum of 3 per crop. Curative action: in the presence of insects, shake the bottle, dilute the content of 6 caps in 1 litre water and repeat the treatment every 7 days. The product has a long-lasting effectiveness, even in case of heavy rain. The simultaneous use of agrochemicals can nullify the effectiveness of the product.
