Flortis®

How to use

Preventive action: shake the bottle well, dilute the content of 3 full caps in 1 litre water and sprinkle the plants with a watering can. It is advisable to carry out a first treatment at the time of sowing or transplanting and repeat it up to a maximum of 3 per crop. Curative action: in the presence of diseases, shake the bottle, dilute the content of 6 caps in 1 litre water and repeat the treatment every 7 days. The product has a long-lasting effectiveness, even in case of heavy rain. The simultaneous use of agrochemicals can nullify the effectiveness of the product.
