

CONTAINER FOR MOUSE BAIT 1 UNIT

Code: 1336000

to fight mice

PACKS

1 container, dimensions: cm 26x12x8.

Charateristics

this is an indispensable tool - HACCP compliant - to fight domestic mice that infest homes, cellars, garages and open spaces. Made of sturdy polypropylene material, it is shock & weather resistant, equipped with a safety lock with key and designed to contain and protect the rodenticide baits that remain fresh, away from dust, dirt and humidity, but (most important) safe from possible contact with children and / or pets. The poison inserted inside is hooked by an underwire, not to disperse it.

How to use

place the container along the internal or external wall perimeter and the usual paths of the mice. When consumption has started, do not move the container (not to stimulate an attitude of distrust in rodents): baits must be repaced after consumption.
