

REPTILES DISACCUSTOMER, 1000 ML

Code: 1337220

ideal for gardens, campsites, woodpiles, doors etc.

FORMULATION

microgranulated.

PACKS

1000 ml spreading pot.

Charateristics

the product naturally prevents the presence of snakes (and reptiles in general) in the outdoor sites. It can be used in all places where it is necessary to prevent the infestation (gardens, campsites, woodpiles etc.). It is based on essential oils whose fragrance is unpleasant to reptiles. The product is not dangerous to people, animals and plants and is not harmful to the environment if used properly.

How to use

scatter about 15 g (suitable for about 1 m²) on the affected area or along the usual ways of the reptiles and in the places where their presence is suspected. The effectiveness lasts about one week: rains and abundant irrigations can reduce the effectiveness of the treatment.
