

UREA FERTILIZER, 4 KG

Code: 2113300

EC Fertilizer prompt and extended action

COMPOSITION

N 46

FORMULATION

granulated

PACKS

4 kg sack

Charateristics

fertilizer with a high nitrogen content and easy absorption. It turns into ammonium nitrogen and then nitric nitrogen in a few days, ensuring to crops a prompt feeding and a reserve feeding at the same time. Its high water solubility makes it absorbable at once from soil and plants, avoiding the risk of dispersion due to leaching. It is recommended both at the time of the soil preparation and during the growing season on horticultural crops and fruit-bearing plants, since the nitrogenous fertilization is important in the stage of the plant growth.

Florlis®

How to use

scatter 30-40 g/m² (about one handful) at the time of the soil preparation and at the beginning of the growing season. For fruit-bearing plants it is advisable to scatter 100-150 g (about 2-3 handfuls) per plant according to the foliage size.
