

THE PLANT THIRST-QUENCHER

Code: 5400010

for a gradual water release up to 20-30 days

FORMULATION

gel.

PACKS

300ml bottle

Charateristics

product studied on purpose to guarantee a gradual and continuous water release. The cellulose fibres which make up the gel retain the water and release it then slowly when the product comes into contact with the soil. Thanks to the action of the micro-organisms inside the gel, the water is so available to the plant for 20-30 days*. *the duration is approximate and can vary depending on many factors: season, plant exposure, indoor or outdoor placement, soil, kind and size of the pot etc.

How to use

remove the plug and drive the bottle head down into the previously moistened soil at least 2-3 cm deep. Use one bottle for 15 cm diameter pots, 2 bottles for 30 cm pots and so on.
